Placement Manager :
Dr Stuart K Donald

Dear Douglas,

Professional Training

At the University of Abertay Dundee a sandwich course in Applicable Mathematics was first introduced in September 1974. The course has evolved over the years and the present five year honours degree course is designed to meet the demand in industry and commerce for graduate Applicable Mathematicians. Students on this course study mathematics, statistics, economics and computing as well as other related subjects.

The course was revised this year and one of the main changes is a move from a thin to a thick sandwich structure. The title of the revised course is Applicable Mathematics with Computing and I enclose leaflets which give details of the course content and training requirements.

For this transitional year only I have a small number of third year students seeking their second work experience placement of 24 weeks duration during the period 16 March to 18 September 2008. In July/August 2008 our second year students who choose the sandwich option on the new course will require placements of 48 weeks duration.

I would be happy to nominate students for your consideration if you have any suitable vacancies.

Please do not hesitate to contact me if you require any further information.

Yours sincerely,

Dr Stuart K Donald
